Most material risk factors pertaining to the Guarantor

The key risks with regard to Natixis' structure and operations are set out below:

1. Natixis is exposed to the credit risk of its counterparties in its activities. Due to the inability of one or more of its counterparties to comply with its contractual obligations and in a context of increasing defaults by its counterparties, Natixis could suffer financial losses of a greater or lesser magnitude depending on the concentration of its exposure to those defaulting counterparties;
2. Financial markets' fluctuations and high volatility may expose Natixis to the risk of losses in relation to its trading and investment operations;
3. If Natixis fails to comply with applicable laws and regulations, Natixis could be exposed to heavy fines and other administrative and criminal sanctions likely to have a material adverse impact on its financial position, business and reputation;
4. Natixis is exposed to risks related to the environment in which it operates, and notably its macroeconomic environment, the financial markets' conditions and the changes in the legislative and regulatory framework applicable to the structure of Natixis and its activities, which could adversely affect its financial position; and
5. In the context of its insurance activities, Natixis is exposed mainly to asset impairment risk (fall in the equity or real estate market, widening spreads, interest rate hikes) as well as the risk of lower interest rates which would generate insufficient income to meet its guaranteed principal and returns.

What are the key risks that are specific to the securities?

There are also risks associated with the Notes, including a range of market risks, including:

General risk factors

Risk of volatility of the Notes: Noteholders could face a risk of volatility, which refers to the risk of changes in the value of a Note, as well as any difference between the valuation level and the sale price of the Notes on the secondary market. Events in France, Europe or elsewhere could cause volatility in the secondary market of the Notes, and the resulting volatility could have a negative impact on the trading or sale price of the Notes.

Risk relating to the NSA Guarantee (which include reference to resolution or insolvency risk of the Guarantor: Noteholders may suffer losses should Natixis (the **Guarantor**) undergo resolution proceedings pursuant to European regulation and French transposition rules establishing a framework for the recovery and resolution of credit institutions and investment firms. In case of resolution proceedings, the noteholders could face non-redemption or redemption at an amount lower than the amount expected.

Risk of early redemption in the event of illegality or changes in taxation or force majeure or significant alteration event: In the event of redemption of the Notes before maturity in the event of illegality or changes in rules on

withholding taxes or if the performance of the Issuer's obligations under the Notes is impossible or insurmountable due to the occurrence of in the event of force majeure event, the noteholders will receive an amount equal to their fair market value in the event of redemption prior to maturity. The fair market value payable in the event of early redemption may be lower than the amount that they initially anticipated.

Risk of loss of capital for Notes whose redemption amount is determined by reference to a calculation formula and/or linked to an underlying asset: The amounts of principal payable by the Issuer are indexed on or linked to the performance of the Preference Share. Such amounts may be determined by the application of a calculation formula and one or more observations or the occurrence of certain events in relation to the Preference Share. If there is an adverse change in the performance of the Preference Share, exacerbated, if relevant, by the terms of the above-mentioned formula or indexation provisions, investors may suffer a significantly decreased redemption amount on the Notes or even a total loss of its investment.

Currency fluctuations and exchange controls risk: Currency fluctuations and exchange controls can have a substantial impact on the value of the Notes. Consequently, it is possible that, following a disruption in the source of the price or a substantial fluctuation in exchange rates, there could be a decrease in the return on the Notes or the redemption amount after conversion into the investor's currency.

Risk of low or no returns: If there is an adverse change in the price, value or level of the Preference Share, exacerbated, if relevant, by the terms of the above-mentioned formula or indexation provisions, investors may suffer a significantly decreased rate of return on the Notes or even no return whatsoever.

Exposure to the Preference Share Underlying: The underlying of the preference share may be one or more underlying asset(s) such as (without limitation) a share, an index, a fund and may change over time as a result of performance or other factors. Investors should carefully consider the risks associated with these asset classes on the basis that the preference share to which the Notes are linked will be affected by their exposure to the relevant underlying of the preference share.

Early redemption: The Issuer may (i) receive notice from the Preference Share Issuer that the preference share will be early redeemed following the occurrence of certain events affecting the preference share or the preference share issuer or (ii) determine that such events have occurred. In such cases, the Issuer will redeem the Notes early at their fair market value.

In the case of early redemption of the Notes, at the fair market value, investors may receive less than their original investment and even an amount equal to zero. In addition, investors may not be able to reinvest the redemption proceeds so as to achieve a potential return similar to the potential return available under the Notes if the Notes had continued to maturity.

Credit and fraud risk of the Preference Share Issuer: The value of and return on the Notes depends on the performance of the Preference Share issued by the Preference Share Issuer and is therefore exposed to risks (credit, misappropriation of funds or other fraudulent action risks) associated with person acting on its behalf or the issuer of the Preference Share which is not an operating company, and its sole business activity is the issuance of redeemable preference shares. The occurrence of such risks would have a significant effect on the value of the Preference Share and consequently on the value of the Notes.

Past performance of the Preference Share or the relevant Preference Share Underlying is not indicative of future performance.

The dealer and its affiliates may also have engaged, and may in the future engage, in investment banking and/or commercial banking transactions with, and may perform other services for, the Issuer and the Guarantor and their respective affiliates in the ordinary course of business.

Various entities within the BPCE Group (including the Issuer and Guarantor) and affiliates undertake different roles in connection with the Notes, including Issuer of the Notes and may also engage in trading activities (including hedging activities) relating to the Underlying Reference and other instruments or derivative products based on or relating to the Underlying Reference which may give rise to potential conflicts of interest.

Natixis, which acts as arranger, permanent dealer, Calculation Agent and Determination Agent is an affiliate of the Issuer and the Guarantor and potential conflicts of interest may exist between it and holders of the Notes, including with respect to certain determinations and judgments that the Calculation Agent and Determination Agent must make. Other than as mentioned above, so far as the Issuer is aware, no person involved in the issue of the Notes has an interest material to the offer, including
